

DocsCorp Suite

Converging Document Production Technologies for Legal Firms

In December 2008 DocsCorp, a global leader in content and information management and workflow, acquired its 100th client in Europe using the pdfDocs Solutions Suite. Especially designed to enable businesses to share critical information in a format that is secure, complies with industry standards and universally readable, pdfDocs is a unique solution providing PDF management, document comparison, metadata management, Matter Bible creation, and OCR imaging.

pdfDocs integrates into all MS Office applications including MS Outlook, document management systems (including Autonomy iManage and Open Text) and supports Citrix and terminal server environments.

"We chose DocsCorp because of the fantastic support we received, the professionalism and knowledge, the cost -which was very competitive- and the solution allowing us to compare PowerPoint presentations and Excel spreadsheets."

Jinder Kaur, Applications Manager, Hammonds

Converging Document Production Technologies for Legal Firms

The pdfDocs Solutions Suite

pdfDocs Desktop integrates into business and document management systems to provide PDF creation, collation, annotation, redaction, bates numbering and electronic filing capability to legal professionals. Its Binder technology automates the process of creating CD Bibles.

pdfDocs compareDocs uses the world's leading-edge technology to compare and analyse the difference between two documents with incredible speed, accuracy and reliability. compareDocs integrates into office applications and systems to deliver unparalleled levels of efficiency and productivity.

pdfDocs FormFiller is a PDF form solution that enhances business processes and workflow. PDF forms can be viewed, edited, saved, digitally signed and distributed in a format that is secure and universal.

pdfDocs OCR Server provides law firms with an OCR solution that integrates with their existing software applications to capture critical information locked away in image files, which can then be made accessible to all in a format that is searchable. PDF documents can be published to Word to save retyping.

"We reviewed DocsCorp to tackle our document risk strategy in the area of document security and integrity. DocsCorp's ability to automatically create PDF and strip metadata was a very attractive proposition. In addition, with the option to add functionalities including document comparison and bible creation, it made this a low risk, good value decision." **Tim Hyman, IT Director, Taylor Wessing**

ROI - Why Choose pdfDocs?

The pdfDocs Solutions Suite is the only integrated system designed to solve problems legal professionals face every day managing paper and electronic documents and forms. pdfDocs completely integrates with core business applications, processes and systems to streamline workflow, increase productivity, reduce costs and risks.

Since deploying the pdfDocs Solutions Suite, many leading UK law firms have seen business improvements, efficiencies and strong ROI. Carey Olsen, for example, relies heavily on the pdfDocs OCR Server solution to convert image documents to Word, saving thousands of pounds yearly on typing pool costs. Hammonds, who have replaced DeltaView with compareDocs as its document comparison solution, makes considerable savings over three years in implementation costs alone. Cripps Harries Hall LLP will no longer require a centralised service or a dedicated computer to generate CD Bibles. The IT department will no longer support this activity as the staff are completely self-sufficient in generating and transmitting CD Bibles with pdfDocs Binder.

"We moved to DocsCorp because our previous comparison software would, on occasion, miss differences between documents. compareDocs finds differences more reliably which leads to less manual checking. With Desktop we can now create trial bundles electronically without the need for a centralised service or a dedicated computer."
Mike Burton, Head of IT, Cripps Harries Hall LLP
